9.	Other Short Term Liabilities ¹ as % of Total Assets	25.5%

1. Short term liabilities represent amount payable within 12 months from the reporting date excluding for commercial papers

6) Institutional set-up for liquidity risk management

In line with RBI guidelines and ICICI Group's overall business framework, the Board of the Company has approved a comprehensive ALM policy that defines composition of Asset Liability Management Committee (ALCO) and the ALM framework for liquidity and interest rate risk management. ALCO reviews the Asset Liability profile and interest rates on regular basis.

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset. The Company proactively manages liquidity risk as part of its ALM function. The

ALCO of the Company monitors liquidity risk through various tools like statements of short term dynamic liquidity, structural liquidity, interest rate sensitivity, liquidity ratios, LCR etc.

For measuring and managing net funding requirements, the Company has adopted use of a maturity ladder and calculation of cumulative surplus or deficit of funds at selected maturity dates. The Statement of Structural Liquidity is prepared by placing all cash inflows and outflows in the maturity ladder according to the expected timing of cash flows. The Company monitors absolute and/or cumulative mismatches as applicable across all time buckets by establishing internal prudential limits consistent with regulatory requirements. Further, the Statement of Structural Liquidity is used as a standard tool for measuring and managing net funding requirements and the assessment of a surplus or shortfall of funds in various maturity buckets in the future. The Company has certain resources (enumerated as below) at its disposal for meeting the shortfall in liquidity if the outflows of cash occur significantly earlier than indicated in the ALM statements or are for significantly different amounts from those indicated in the ALM statements.

- a. Balances in tri-party repo
- b. Line of credit (overdraft limit) from banks
- c. Schemes of Overnight/Liquid mutual funds
- d. Other liquid investments (in excess of statutory requirements, if any)
- e. Unavailed term loans/NCDs/Transfer of loan limits from various banks
- f. Unutilised rating limits under various borrowing programmes.

A Liquidity Contingency Plan (LCP) has been formulated to assist the ALCO in responding to situations arising out of liquidity crisis. The plan is an extension of dynamic liquidity statement and assists in:

- Liquidity planning for contingencies
- Identifying mitigants to liquidity stress arising out of contingencies
- Assessment of liquidity indicators and liquidity monitoring threshold
- Communication and action protocol
- Restoring normalcy in the event of any contingency

In order to ensure stability in liquidity management, the Company's ALM policy also defines monitoring of liquidity ratio of 'high value bulk deposits to total borrowings' and high value customers' deposits (aggregate of all deposits having value ₹ 250.0 million and more from single depositors) to total deposits'. Further as per revised regulatory framework, the company has adopted the below stock approach ratios in the ALM Policy recently.

- a. Short-term liability to total assets
- b. Short-term liability to long-term assets
- c. Long-term assets to total assets
